Feeder Pellets

Feeder Pellets (FAX15) pellets are a ruminant ration for fattening of cattle & sheep. With a minimum 25% NDF it is suitable to be fed as a complete feed to cattle and sheep.

This product is derived from the blending and pelleting of Feed grains, Vegetable meals & high effective fibre products. The effective fibre in this ration promotes cud chewing and saliva production, in turn this creates better performance in the rumen.

Analysis

Crude Protein (min)	15.4%
Moisture (max)	14%
Dry Matter	90%
Oil (min)	5%

Used For

Can be used as animal feed ingredients or formulations especially for ruminants Dairy Cattle/Beef Cattle.

Feeding recommendations

FAX15 pellets are safe to feed free access to cattle & sheep. When changing over to FAX15 pellets it is recommended to feed the stock on good quality cereal hay or straw for several days then introduce the FAX15 pellets at a small rate and increase daily over a period of 7 to 10 days. Consult your nutritionist for recommended inclusion levels and feeding rates.

Storage

Store in a dry area, away from bird and rodent infestation.

Product should be stored in a cool and dry place where temperature does not exceed 30 degrees. Please note that product may turn rancid if exposed to temperatures in excess of 40 degrees.

Disclaimer

All animal feed products should be fed as part of a healthy balanced diet matched to the specific requirements of the herd. Please note that recommended feeding rates are given as a guideline only and will vary based on the total diet and actual feed intake of your animals. It is recommended that you consult your vet, nutritionist or farm consultant before making any dietary changes.
